CONGRATULATIONS ON YOUR PURCHASE OF A NEW YETI. WELCOME TO THE TRIBE.

We are confident your new bicycle will exceed your expectations for value, performance, and ride quality. Each frameset and component has been custom specified and designed to enhance your riding experience. Whether you are a beginner cyclist, or a seasoned pro, your Yeti bicycle will provide endless hours of two-wheeled fun.

This manual outlines basic setup and maintenance recommendations of your new Yeti. Because it is impossible to anticipate every situation or condition that may occur during the assembly, setup, and maintenance of your bicycle, Yeti recommends that all service and repairs be performed by your local authorized Yeti Dealer.

This model specific manual is designed to be used in conjunction with the general Yeti Owner's Manual and the manuals supplied by the suspension manufactures. If you did not receive the Yeti owner's manual or the manual provided by the suspension manufacturer download the materials off the Internet, or contact your local dealer.

This manual contains many "Warnings" and "Cautions" concerning the consequences of failure to maintain or inspect your bicycle. The word "Warning" indicates a potentially hazardous situation in which, if not avoided, could result in serious injury or death. The word "Caution" indicates a potentially hazardous situation in which, if not avoided may result in minor injuries or damage to your bicycle or a component of your bicycle. Be sure to read and understand all of the Warnings and Cautions listed in the manual.

Bicycling can be a hazardous activity even under the best of circumstances. Proper maintenance of your bicycle is your responsibility and when done properly helps reduce the risk of injury and damage to your bicycle.

Warning: Make sure you review and understand the warnings, instructions, and content of this manual and accompanying manuals for your bicycle.

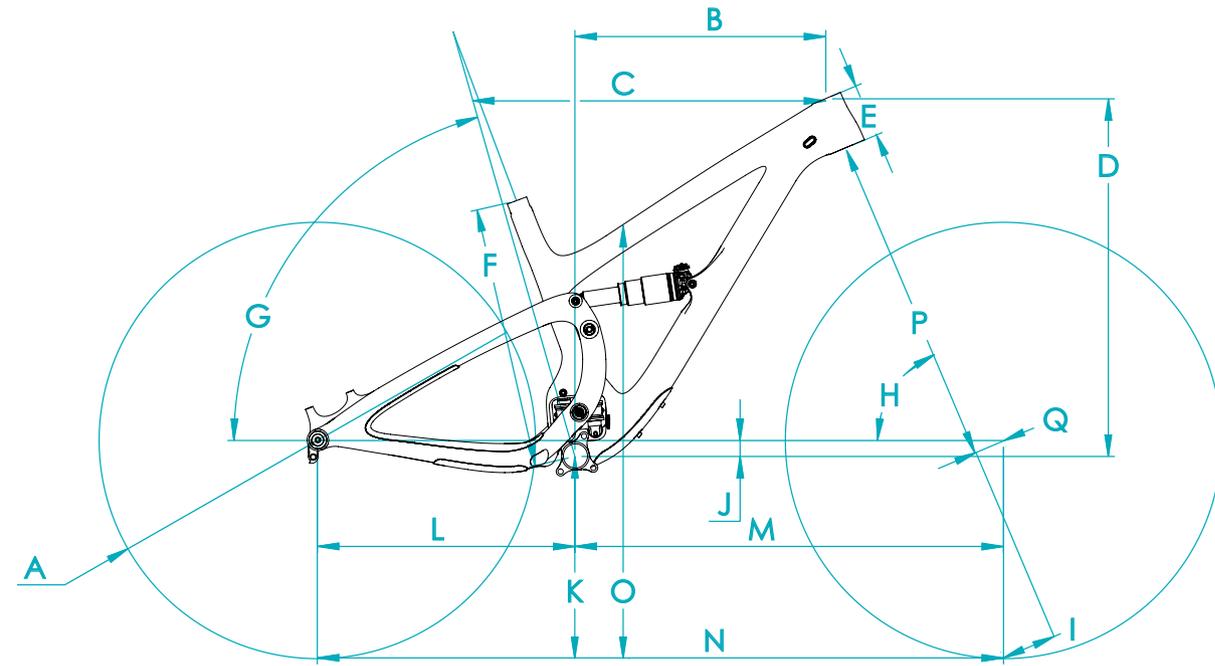

Warning: Technological advances have made bicycles and bicycle components more complex and the pace of innovation is increasing. It is impossible for this manual or the accompanying manuals to provide all the information required to properly repair and/or maintain your bicycle. In order to help minimize the chances of an injury, it is critical for you to have work performed by an authorized Yeti retailer.

THE LOWDOWN ON THE SB5.5 AND ITS FEATURES.

1. SWITCH INFINITY TECHNOLOGY PATENTED SUSPENSION SYSTEM
2. HIGH MODULUS CARBON FIBER MAIN FRAME AND SWING ARM
3. COLLET AXLE SYSTEM ON PIVOTS REDUCES BEARING WEAR
4. OPTIMIZED FOR 1X DRIVETRAINS ONLY
5. ISCG 05 CHAINGUIDE MOUNTS
6. TAPERED INSET HEAD TUBE (44MM/56MM)
7. SUSPENSION BY FOX
8. CUSTOM DEBRIS AND CHAIN SLAP GUARDS
9. INTERNAL CABLE ROUTING
10. INTEGRATED AXLE AND DERAILLEUR HANGER SYSTEM

1. The SB5.5 delivers 5.5 inches (140mm) of travel with our patented Switch Infinity Technology. Efficient pedaling performance while still smooth and continuous when the going gets rough.
2. High modulus carbon provides a stiff, strong and light weight chassis.
3. Colleted pivot axles help create a stiff interface between the front and rear triangles of the frame. Custom Enduro Max sealed bearings keep things moving freely at the pivots.
4. The SB5.5 does away with the front derailleur mount, making it a 1x drive specific frame. This increases stiffness in the frame, making the SB5.5 one of the stiffest bikes in our lineup.
5. ISCG 05 chain guide mounts are included on the SB5.5 if case you want to go for some extra drivetrain security in the rowdy sections.
6. Using our inset head tube on the SB5.5 allows for a larger head tube with more area, increased stiffness, and lower overall ride height without compromising any performance.
7. The SB5.5 uses a 2.25 inch stroke, 7.875 inch eye to eye DPX2 EVOL shock, by Fox Racing Shox.
8. Custom guards on the seat stay, chain stay and down tube keep things quiet while riding and protect the frame.
9. The SB5.5 features internal routing for all cables, making the bike quiet and clean looking as well as reducing cable rub on the paint.
10. Dedicated 12 x 148 Boost dropouts and integrated hanger with axle threads for strength, stiffness, ease of hanger and wheel installation.

OVERVIEW

Following these guidelines will help maintain the performance of your bicycle and prevent more serious problems from arising. It is important to remember that service intervals can vary depending on climate, trail conditions and riding frequency. If you are unsure about working on your own bicycle, contact your authorized Yeti Dealer for more information on general bicycle maintenance.

TORQUE

Yeti strongly recommends using a torque wrench when assembling your frame. Torque specifications for individual parts on the SB5.5 are listed below, as well as in the step by step assembly instructions later in the manual. For general bicycle maintenance please consult the torque specifications of the component you are adjusting.

KEY TORQUE SPECS

SHOCK SETUP

YETI TIPS

Inspect your shock for any visible damage. If oil is leaking or you notice any damage to the surfaces or seals, please contact the Fox Racing Shox service center for repair at 800.FOX.SHOX or your local bike shop.

Shock set-up can fluctuate greatly based on the rider. The set-up guide is intended as a base line to get the rider started. Experiment with your settings to find the set-up that works best for you.

We recommend starting out with 30% sag, which is 17.5mm of shock stroke.

TOOLS NEEDED

- Shock Pump
- Metric Tape Measure
- 2.5mm allen wrench

QUICK START GUIDE

ADJUSTMENT	SETTING
BASELINE AIR SPRING SETTING	RIDER WEIGHT (PSI)
MEASURED SAG (MM)	17.5MM
REBOUND	7 CLICKS*
COMPRESSION ADJUSTMENT	OPEN

**All clicks are counted counter-clockwise, rotating from the all the way "in" or clockwise dial position.*

01. AIR PRESSURE

The main air spring controls sag. For the SB5.5 to ride properly it is important to setup the shock with the correct amount of sag. To increase sag, reduce the main spring air pressure. To reduce sag, increase the main spring air pressure. Always cycle the shock at least 10 times after any pressure adjustment to equalize the EVOL chamber before measuring sag.

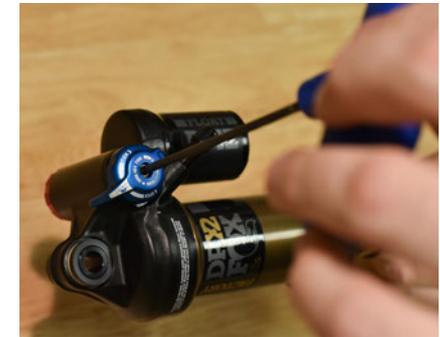

02. SAG

The SB5.5 works best with 17.5MM of measured sag. To measure the sag slide the travel indicator (O-Ring) up against the shock body. With a friend supporting the bike and with the compression set "open," sit on the saddle and allow your body weight to compress the shock. Once you have compressed the shock, get off the bike and measure the distance between the shock body and the new position of the travel indicator (O-Ring). This is your sag.

03. REBOUND

Rebound is adjusted using the red knob located on the drive side. Clockwise will slow the rebound, counter clockwise will speed it up. Rebound needs to be tuned to rider preference and air spring pressure. This may take some experimentation to dial in. Too slow and the bike will feel like it is not ready for the next bump. Too fast and it will feel like the bike is bucking you off after an impact.

04. COMPRESSION

The blue lever on the non drive side has 3 positions: Open, Medium and Firm. For our bikes, unless you are on pavement on the way to the trail, we recommend using the "open" setting. The Switch Infinity design will do the rest! Low-speed compression is adjusted using a 2.5mm allen wrench. It is located in the center of the blue 3-position lever. There are 10 clicks on this adjustment. This adjustment only effects the the "open" position.

DERAILLEUR HANGER INSTALL

YETI TIPS

NOTE: The hanger cap is REVERSE THREADED. Be careful not to strip out the Hanger tool faces. The cap is marked with a tighten direction arrow.

Inspect the frame around the hanger seat for any suspicious damage any time you replace a hanger, especially if you are replacing it due to damage.

TOOLS NEEDED

- 6mm Allen key
- Grease

01. HANGER SEAT

Lightly grease the outside surface of the hanger where it interfaces with the frame. The hanger will fit into its space on the inside of the swing arm and should press easily into the frame.

02. HANGER CAP SEAT

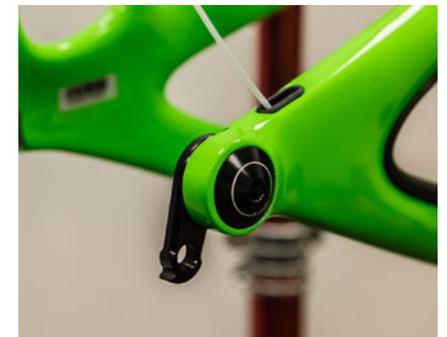

Lightly grease the threads on the hanger cap. The hanger cap REVERSE threads into the hanger from the outside of the swing arm. Hand thread the cap into the hanger.

03. TIGHTENING

Using a 6mm allen key, tighten the hanger cap into the hanger. REMEMBER, it is REVERSE THREADED. Follow the "Tighten" arrow on the cap. Finish tightening with a torque wrench if available.

**Torque to 80 in/lbs (9Nm)*

04. COMPLETED

The installed hanger and cap should look like this, sitting flush against the frame on both the inside and outside of the swing arm. If the hanger or cap are not sitting flush against the frame, remove them and inspect the frame surfaces for debris as well as the threads for damage.

CABLE SETUP

The SB5.5 uses internally routed full length cable housing. By using full cable housing, we have eliminated break points in the line of your shifter housing. This allows for better overall shifting performance by reducing the entrance of unwanted elements such as sweat and sediment. By routing that housing internally we add to the protection from the elements and clean up the lines of the bike. No more zip ties to snag your shorts on and no more loose housing rattling around on your paint.

Do not remove any of the housing guide tubes that are installed in your new frame and swing arm. They will be used to pull your housing through the frame. If you are replacing used housing, use the old housing to pull your new housing through the frame.

If you don't have the guide tubes or old housing you can fish the housings through the frame, but it will be much easier to use an internal cable routing tool.

Caution: The failure to properly route shifter housing can cause malfunction of the shift mechanism and unexpected shifting of gears.

REAR BRAKE AND DERAILLEUR

Your rear brake and shifter housing should run parallel around the left side of the head tube. Run the shifter housing and the brake housing into the individual ports at the head tube and thread them down into the down tube toward the exit ports above the Infinity Link. The shift housing comes out of the port on the drive side and goes immediately into the corresponding port on the swing arm. The brake housing does the same on the non-drive side.

NOTE: Use rubbing alcohol to help the housing pass through the grommets as you thread it through the frame.

Starting at the back of the bike and working forward will be necessary for some brake systems.

REAR DERAILLEUR CONTINUED

The rear derailleur housing will exit the swing arm via the port on the upper side of the seat stay right above the rear derailleur. Create a gentle curve to the derailleur and adjust to the manufacturers specifications.

REAR BRAKE CONTINUED

The rear brake housing exits the swing arm on the inside of the chain stay and goes directly up to the caliper. If your caliper allows, adjust the housing attachment angle to reduce the bend in the cable as much as possible.

INTERNALLY ROUTED SEAT POST

The SB5.5 is designed to use an internally routed dropper post. The housing should be routed from the post forward. Guide your housing through the seat tube and into the down tube use the guide tube installed in our new frames, or use the old housing if you are replacing the line on a used bike. The line should exit the down tube at the head tube on the drive side and curve around the head tube to the lever on the left side of the bar. If you are mounting your lever on the right side, you would simply route that housing over to the right. If you do route to the right we recommend placing some clear vinyl in front of the port to prevent cable rub.

FRAME ASSEMBLY

YETI TIPS

Make sure your tools are in good condition. A worn allen key can round the hex on a bolt not allowing for proper torque.

Torque settings are listed throughout the instructions. It is important to prep all bolt threads. The instructions denote whether to use a Loctite compound or grease.

TOOLS NEEDED

- 2.5mm allen key
- 5mm allen keys
- 4mm allen keys
- 10mm allen key
- Guide pin tool (Or two)
- Torque wrench
- Grease
- Blue (242) Loctite

Warning: Service on Yeti bicycles requires special knowledge and tools. Yeti Cycles recommends that all service and repairs be performed by an authorized Yeti Dealer

01.

All the parts you'll need to get your SB5.5 frame assembled. Please refer to the exploded view later in this manual for more information.

02.

Slip washers onto and apply blue (242) Loctite to the 4 bolts that secure the Switch Infinity Link to the frame. Insert them into their place and hang the black fitting washers from them. Place washers with the flat side flush to the frame and opening.

03.

Insert the Infinity Link from the non-drive side. The Infinity logo should be up and the Fox logos facing the non-drive side. Rock the link into place capturing the black fitting washers. Make sure that they have not slipped or rotated. The flat end of the fitting washers must be facing the opening in the frame and they must nestle into the Infinity Link stanchions.

04.

While holding the link in place lightly tighten the bolts. You want them to snug so that the link does not move and so that the fitting washers are fully captured, but don't try to torque them by hand! Finish the job with a torque wrench.

*Torque to 12 Nm

05.

Lightly grease the bearing surfaces on your link.

06.

Place the bearing race extender washers (300020049) on the lower link bearings. There should be just enough grease there to hold the washers in place.

09.

Insert the collet axle nut (300030287) in the corresponding keyed hole and thread the axle in using a 5mm allen wrench. This acts like a headset and is meant to preload the bearings.

*Torque: 3 Nm

10.

Install the well greased lower link collet wedge. (300040486) Tighten with a 4mm allen wrench and finish with a torque wrench.

*Torque: 8 Nm

07.

Insert the lower end of the link into the frame with the bearing race extending washers in place. Gently rest the link upright in the frame.

08.

Using one hand, align the link and press the lightly greased pivot axle (300040483) through. This will hold the link in place while you prep the pivot axle nut.

11.

Your lower link pivot is now complete. Wipe any excess grease from the pivot axle area now and double check your torques. This is more difficult later in the process.

12.

Place the upper link bearing race extender washers onto the upper link bearings. The grease should hold them in place.

13.

Grease the main pivot collet axle (300040485), including the threads.

14.

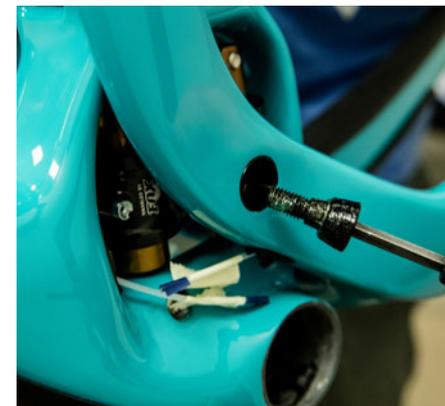

Slide the swingarm over the infinity link and insert the main pivot collet axle from the non drive side. You may need to use a guide pin from the drive side to help align the bearing spacer in the link.

17.

Insert the lightly greased upper link pivot axle nut (300030286) into the keyed hole in the swingarm and, using a 5mm allen wrench, thread the pivot axle into the nut. Using a piece of foam or bubble wrap behind the link will help protect your paint until the shock is installed.

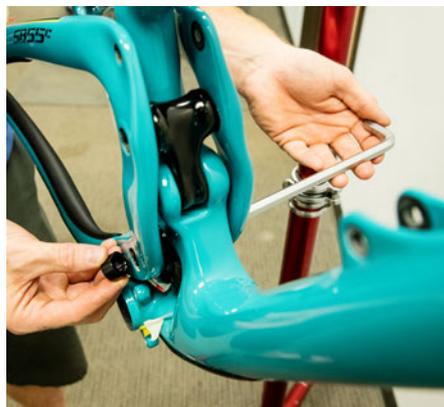

**Torque to 3 Nm*

18.

Grease and install the main pivot collet wedge with a 5mm allen wrench. Be sure to grease both the threads and the collet wedge.

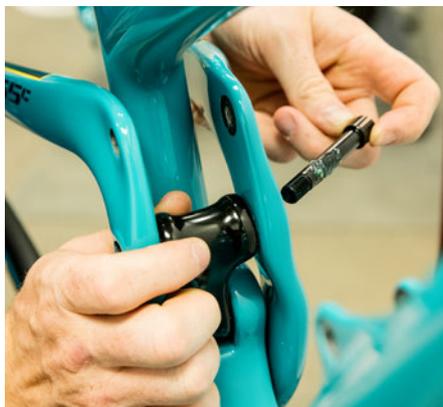

**Torque to 14 Nm*

15.

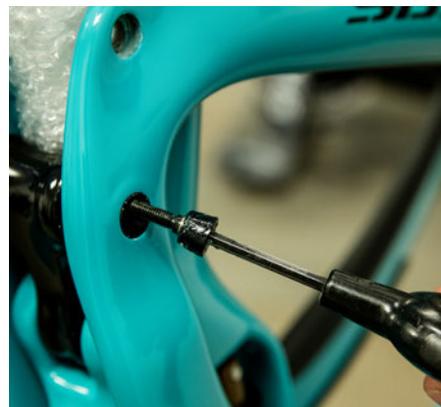

Insert the lightly greased main pivot axle nut (300030285) into the corresponding keyed hole in the swingarm and thread the main pivot collet axle into it. Using a 10mm allen wrench, tighten the main pivot collet axle.

**Torque: 3.5 Nm*

16.

Grease the upper link pivot collet axle (300040484). Push the pivot axle through the swingarm and the upper link bearings from the non drive side. You may want to use a guide pin to help align the bearing spacer.

19.

Grease and install the upper link collet wedge with a 4mm allen wrench. Be sure to grease both the threads and the collet wedge.

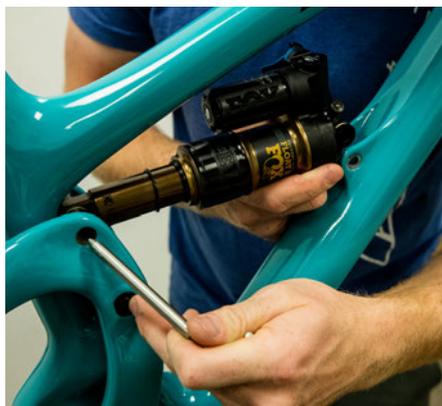

**Torque: 8 Nm*

20.

Wipe up any excess grease around the collet wedge bolts and remove the foam/bubble wrap from behind the link in preparation for installing the shock.

21.

Slide the rear of the shock into the swingarm, align the shock eyelet and secure with a guide pin.

22.

Align the front shock eyelet to the mounting points on the front triangle and secure with a guide pin.

25.

Place the 6.5mm washer (300030062) over a Male Ti bolt (300030151). Apply Blue LocTite to the threads. Using two 5mm allen wrenches tighten the male bolt into the shock pin.

**Torque to 7 Nm*

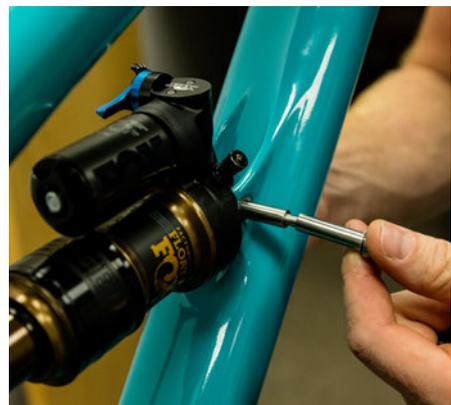

26.

Tighten a male Ti bolt (300030151) into the rear shock pin (300030288), ensuring that it is fully threaded into the pin. Slide a 8.5mm washer (300030069) over the pin and lightly grease the pin shaft.

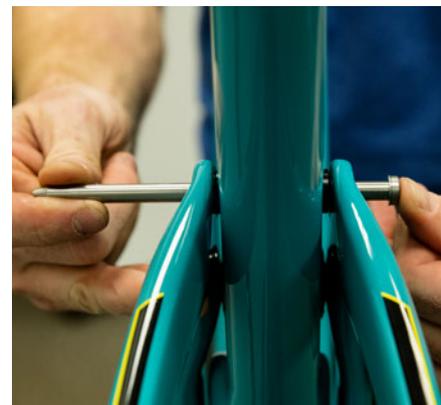

23.

Place the 8.5mm washer (300030069) on the front shock mounting pin (300030262) and lightly grease the pin shaft.

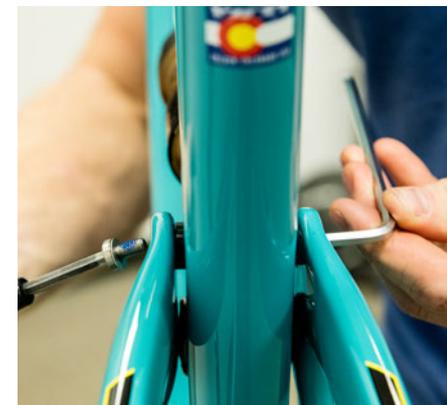

24.

Slide the shock mounting pin over the guide pin and push it through the frame and the shock.

27.

Slide the rear shock pin over the guide pin and push it through the swingarm and shock.

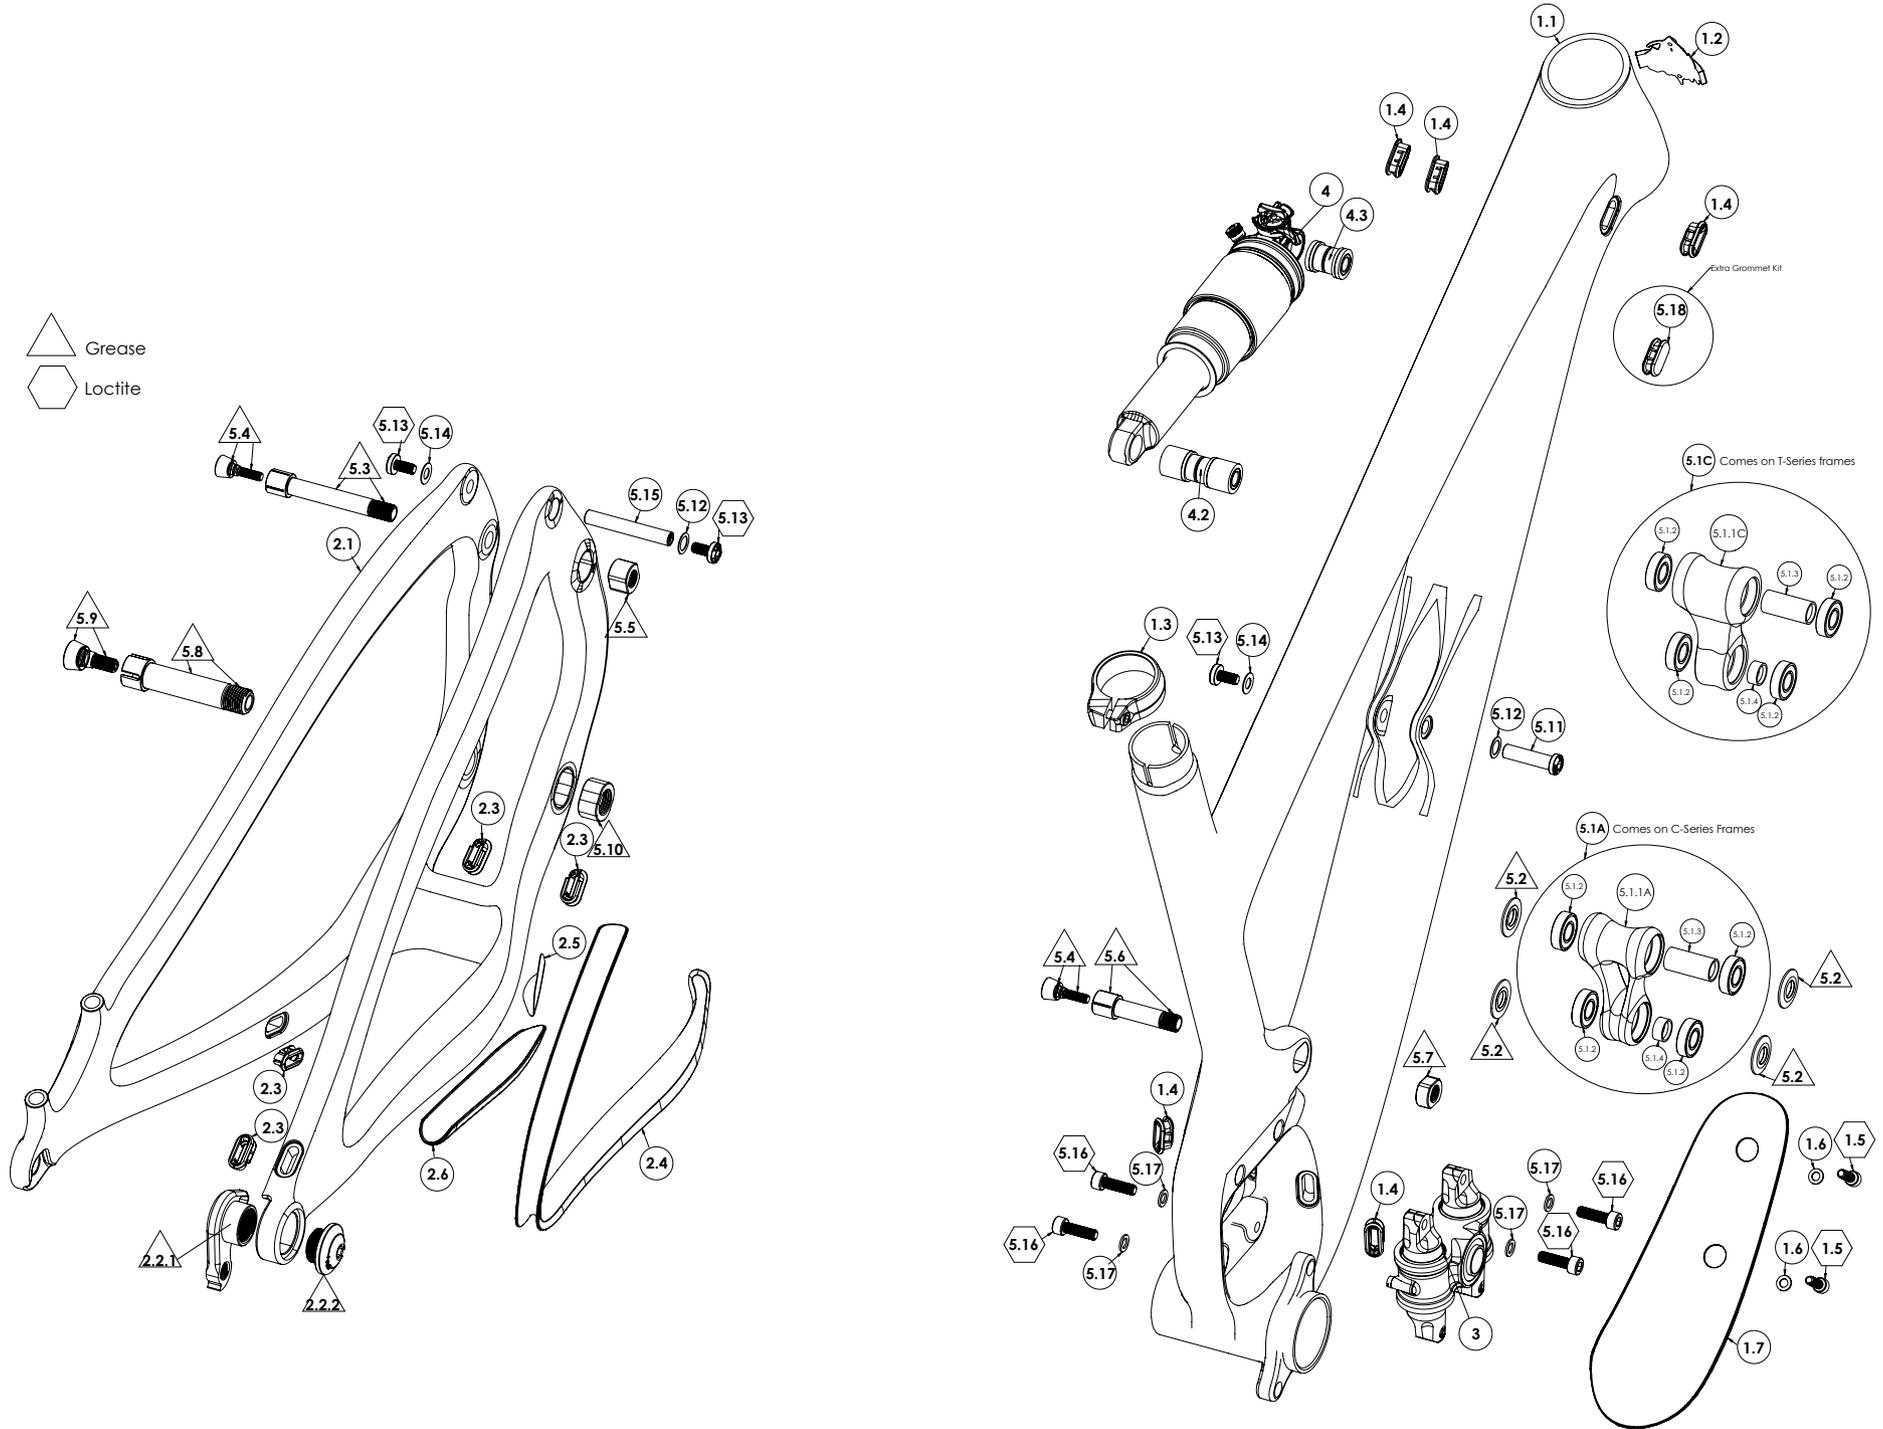

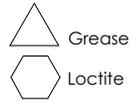

28.

Place the 6.5mm washer (300030062) over a Male Ti bolt (300030151). Apply Blue LocTite to the threads. Using two 5mm allen wrenches tighten the male bolt into the shock pin.

**Torque to 7 Nm*

FRAME ASSEMBLY IS COMPLETE.

WARRANTY

YETI LIMITED (5) FIVE YEAR FRAME WARRANTY

(applies to SB5.5 / SB4.5 / SB5 / Beti SB5 / SB5+ / SB6 / Infinity Link)

Yeti Cycles will repair or replace, at its option, any of the above listed frames it determines to be defective due to defective materials and/or workmanship. The (5) five year limited warranty is conditioned upon the bicycle being ridden under normal conditions and having been properly maintained. This warranty does not apply to the components attached to the frameset such as suspension components, wheels, drive train, brakes, seat post, handlebar and stem. This warranty applies only to the original owner and is non-transferable. This warranty is void if the bicycle was not properly assembled by an authorized Yeti dealer.

ADDITIONAL CONDITIONS

These limited warranties do not apply to normal wear and tear, nor to claimed defects, malfunctions or failures that result from abuse, neglect, improper assembly, improper maintenance, alteration, collision, crash or misuse. The original owner shall pay all labor charges connected with the repair or removal of all components. Under no circumstance does this limited warranty include the cost of travel or shipment to and from an authorized Yeti dealer. In order to exercise your rights under these limited warranties, the bicycle or frameset must be presented to an authorized Yeti dealer, together with proof of purchase.

**The above warranties have been in effect since January 2012. For warranty information on Yeti frames sold prior to that date please consult your local authorized dealer.*

NO FAULT REPLACEMENT POLICY

Yeti Cycles will make replacement parts available at a minimum charge to the original owner in the event of a crash or any other non-warranty situation. Yeti Cycles does this at its sole discretion and reserves the right to refuse this offer.

PRODUCT LIFE CYCLE

Every YETI frameset has a useful product life cycle. The length of that useful product life cycle will vary depending on the construction and the materials of the frameset, maintenance and care the frameset receives, and the amount and type of use the frameset is subjected to over its life. YETI recommends that an authorized YETI dealer should inspect the frame for stress annually. Frame stress could cause potential failure and the signs are usually apparent in the form of cracks, fracture lines, deformation, dents, and any other visual indicators of abnormality. These safety checks for frame stress are important to prevent accidents, injury to the cyclist, and product failure of a YETI frameset.

DISCLAIMER

YETI Cycles is not responsible for any damages to you or others arising from riding, transporting or other use of your bicycle. In the event that your frame breaks or malfunctions, YETI Cycles shall have no liability or obligation beyond the repair or replacement of your frame pursuant to the terms outlined in the warranty.

**If you have a warranty concern, please contact your authorized Yeti dealer.*
